General Sedation Consent Form

Owners Name: _____ BEST Phone Number: _____

Pets Name: _____

Procedure being performed today: _____

****OWNER MUST SELECT LOCATION OF MASS/MASSES/PROCEDURE FOR DOCTOR TO PROCEED****

Pre-Anesthetic Blood Screen

Rest assured, advances in anesthesia and surgery have made routine procedures relatively safe, with a low risk of complications. However, since anesthesia and surgery are not without risk, the American College of Veterinary Anesthesiology states that all animals should have a pre-surgical blood screening. The pre-anesthetic blood screen will help the doctor better assess liver, kidney, and heart function. This is important in the doctor's selection of an anesthetic protocol that is safest for your pet.

- The doctor has included this in the estimate if he/she deems it necessary at this time.

Intravenous Catheter and Fluids

Administering intravenous (IV) fluids during anesthesia maintains blood pressure and increases circulation. IV fluids are also used to administer medications and help the patient recover more quickly.

- The doctor has included this in the estimate if he/she deems it necessary at this time.

I understand that sedation always involves some amount of risk and that during the performance of this/these procedure(s), unforeseen conditions may be revealed that necessitate an extension or variance in the procedure(s) set forth above.

I have read and understand the above, and fully understand the possible consequences of anesthesia and surgery. Any medications or services that are required following an anesthetic or surgical procedure will be the responsibility of the owner. Payment is due at the time of services.
